

NetworkLuki Security Auto Report

Public Redacted Edition - safe for GitHub and security.networkluki.com

Publication status Public-safe PDF generated from the internal report.
Privacy handling Raw IP addresses were removed. The table uses non-reversible public identifiers only.
Scope Security indicators observed in Apache-related traffic and block sets. This document does not include full logs, request payloads, credentials, or server secrets.

TOTAL UNIQUE SUSPICIOUS ENTRIES	IPV4 ENTRIES
97	91
IPV6 ENTRIES	BLOCK SETS
6	2

Public summary

The report shows automated hostile or suspicious internet traffic patterns. The public version keeps the security value of the report while removing address-level indicators that could expose infrastructure details, private block lists, or investigation data.

Observed focus indicators

Indicator	Interpretation	Risk
.env probes	Searches for exposed environment files and secrets.	High
phpunit eval-stdin	Known PHP testing endpoint abuse pattern.	High
cgi-bin attempts	Legacy CGI path probing.	Medium
zgrab scanning	Internet-wide scanning fingerprint.	Medium
xmlrpc / WordPress probing	WordPress attack-surface enumeration.	Medium
Automated clients	Go-http-client and RootEvidence style user-agents.	Medium

Redacted blocked-entry table

Each row preserves the original sequence number and IP family only. The original network address is intentionally not present in this PDF.

#	Public ID	Family	Address status
1	NLK-V4-001	IPv4	Redacted for public release
2	NLK-V4-002	IPv4	Redacted for public release
3	NLK-V4-003	IPv4	Redacted for public release

Publication safety checklist

Check	Status
Raw IPv4 address literals	Removed
Raw IPv6 address literals	Removed
Full Apache log lines	Not included
Credentials, tokens, cookies, session IDs	Not included
Internal file paths and server configuration	Not included
Attack payloads and exploit strings	Summarized only
Public destination	security.networkluki.com

Recommended public wording

Purpose: This report summarizes automated scanning and probing observed against NetworkLuki-managed web infrastructure. It is published for transparency, documentation, and defensive learning.

Privacy: Address-level indicators have been removed. The public identifiers in this document are not reversible and should not be used as threat-intelligence indicators.

Limitations: A suspicious request does not prove a human attacker or confirmed compromise. It indicates traffic that matched defensive filters, known probe patterns, or automated clients.

Generated as a new sanitized PDF. This is safer than placing black boxes over the old PDF because hidden text is not retained underneath the visual layer.
